Advance Program in Clinical Trial, Research and Data Management

The Program endows an introduction to the area of Clinical Trials, with more detailed coverage of the key issues to be considered in their design, analysis, documentation and interpretation.

Program Objectives

The Program aims to develop:

1. A theoretical and practical understanding of the issues involved in the design, conduct, analysis and interpretation of randomized controlled trials of health interventions.
2. Skills to scrutinize information, to critically analyze and carry out research, and to communicate effectively.
3. Describe the uses and applications of the main types of intervention studies: clinical trials and community trials.
4. Describe the essential features and stages in the conduct of a clinical trial, and the role of randomization, use of placebo, blinding / masking and intention-to-treat analysis.
5. Discuss the ethical issues involved in the conduct of a clinical trial.

Program Methodology

- Delivery of the lectures by the technically expertise Faculty.
- Guest Faculty from industry and academia would deliver the lectures.
- Along with the theoretical knowledge students also get a chance to have a practical oriented understanding of the subject e.g. Students are working on Open – Clinical software
- E-learning platform via Moodle would also be employed for the classes.
- Students are taken for Industrial and Hospitals visits to have an overview of the entire Clinical trial process.

Program Duration

The Program Duration is 6 months.

Evaluation

The candidates are evaluated throughout the program tenure by submitting the assignments, research study. Practical evaluation is done through the practical classes, assignments and documentation work of clinical trial program.
